

Make the Smart Choice

Drive Electric ... and Save!

Save Money

Stack up available incentives for purchasing or leasing an electric car.

- ▶ Up to **\$7,000** Clean Vehicle Rebate Project
- ▶ Up to **\$7,500** federal tax credit
- ▶ **Rebates** from air districts and utilities
- ▶ **Discounts** for faculty, staff and students (varies by manufacturer)
- ▶ **Additional savings** on fueling and maintenance costs

Save Time

Skip the gas station and charge whenever or wherever you want.

Did you know that almost all University of California and California State University campuses have on-site electric car charging?

While most electric car drivers charge up at home overnight, you'll find more than **24,000** public charging outlets along California's roadways.

Save the Environment

Pave the way to cleaner air and fewer greenhouse gas emissions.

Over its lifetime, an electric car emits about **29 metric tons** fewer greenhouse gases than a gasoline car.

Driver Spotlight

Michael switched to driving an electric car and has never looked back! Here's what he says about his experience.

This is my first car and I'm so happy!

I live in an apartment with no charging on-site, which made it feel very risky to buy a pure electric vehicle. But between workplace charging and public garages, I figured I had sufficient options.

After my test drive, the decision became even easier—the responsiveness, silence and technological awesomeness inside the car were so exhilarating. Adding the rebate, gas savings and maintenance savings . . . it was the best choice for me. I've made 200+ mile round trips comfortably to all my favorite places, so forget range anxiety.
